

Easy

True Click-n-Measure Capability, CAD-base Graphical Programming, Iconized Part Program Representation

True Click-n-Measure Capability

CMM-Manager ... offers true Click-n-Measure capability. The operator picks the feature on the screen. CMM-Manager will automatically select the proper probing angle and generate collision-free path. The operator then simply clicks the Measure button to confirm the selection, and the CMM will measure the feature rapidly. This allows the operator to concentrate on what feature to measure and report instead of what angle to use or whether probe collision will occur.

Iconized Part Program Representation

CMM-Manager ... organizes part program using clear, easy-to-understand icon representation. Each icon represents a *Measure*, a *Construct* or a *Report* task. This task-oriented design eliminates the headache of dealing with lengthy text based part program.

CAD-based Graphical Programming

CMM-Manager ... provides comprehensive graphical programming tools for the operator to easily create inspection part program directly from CAD model, to easily modify and edit part program, to visually simulate and verify part program.
